

Biomass firing installation (pellets) in a market garden

Moving Grate Firing type VRF 900/1125

with silo discharge NOF 60,
cross conveying augers
undergrate and complete
automatic de-ashing
as well as automatic ignition.

Cramer Jungpflanzen
Bad Salzuflen (NRW)
market garden in
Bexterhagen

Operation in a market garden
usage of fuel: pellets
according to DIN 51731 or
chips according to Ö-Norm

The Moving Grate Firing type VRF is a compact unit of a water-cooled firing apron with a boiler on top and a directly flanged multi-cyclone dust separator (depends on kind of fuel). All of the three components are equipped with a 100 mm heat insulation and covered with coated sheets.

The oil boiler on site could cover the heating in case of emergency.

**With a Moving Grate Firing from Nolting you will be very
flexible, all kinds of wooden fuels are usable for burning.**
