# DISCHARGES FOR BIOMASS-FIRING SYSTEMS

# Sustainable through permanent use

## Pushing Floor Discharge SBA

extremely stable discharge device for biomass-firing systems

### Fuel

- + Wood Chips
- + Wood Shavings
- + Pellets
- + Briquettes

### Advantages

- ✓ designed for highest continuous load
- ✓ suitable for any fuel size
- ✓ hydraulic drive with power distribution in the concrete floor
- ✓ drive-on version

## Discharge NOF

for automatic biomass-firing systems in the lower and middle performance range

### Fuel

- + Wood Chips
- + Wood Shavings
- + Briquettes

### Advantages

- ✓ extremely reliable, low-maintenance operation
- ✓ no double-floor necessary
- ✓ robust design
- ✓ suitable for direct connection to the firing system

## Helical Auger Discharge S 151

for automatic biomass-firing systems in the medium performance range

### Fuel

- + Chips from the wood working
- + Wood Chips up to P16S
- + also for Briquettes
- + Particularly suitable for Wood-based materials

### Advantages

- ✓ low maintenance operation
- ✓ robust construction for continuous operation
- ✓ suitable for round silos as well as for silos with a square or rectangular base
- ✓ special versions with two discharge chutes for silo emptying or multi-firing systems

## Horizontal Auger Discharge S 250

for automatic biomass-firing systems in the larger power range

### Fuel

- + Chips from the wood working
- + Wood Chips up to P16S
- + also for Briquettes and Wood-based materials

### Advantages

- ✓ extremely durable
- ✓ highly reliable
- ✓ almost complete emptying of the silo by horizontal discharge
- ✓ robust construction for a permanent use in silos

*sustainable. innovative. reliable.*
